

DJANGO ASSIGNMENT

Deadline · 27-feb-18

Following questions are expected to be done by you individually and submit by making a zip file containing your Django project .

NOTE: You may use Google for this assignment.

1.USING DJANGO.

Create a django project for managing registration for Different events at navprayas.

Your project should have two apps.

First app Named: Home(two pages page)

Second app Named: Register(two pages)

Requirement:: at home , at first page any one may see about navprayas and a link to events page. The second page called events page should show events (Name , short description) as a list of available events and a link to register for the event.

Link should redirect to the registration page.

Register app should show the registration page as first page.

Second page should show the acknowledgement.

You should create the four reference pages(for the apps) by yourself and may use the details of NP as given In the pdf along with the assignment.

ACTIVITIES

For reference you may use django tutorials at given tutorial link.

<https://docs.djangoproject.com/en/2.0/intro/tutorial01/>

For any query , please contact the NP web group and finish this task as soon as possible.

We will go for final distribution of actual work after this. Also a good news, you all will be working for backend in the real navprayas project. You will be provided front end html pages by us.
