PYTHON **ASSIGNMENT**

Deadline – 9-Mar-18

Following questions are expected to be done by you individually and submit by making a folder containing your respective answers.

NOTE: You may use Google for this assignment, especially for first assignment and activity.

1. Create a dictionary (hash) with 20 Student names, where the student name would be a string and the key, and the roll no. would be the value

2. Display the names of students to the user which are available in the dictionary

3. Get input from the user on the city name (hint: use input() method)

4. Display roll No based on user's student choice

5. Loop - keep the program running and prompt the user for new student names to lookup

6. Method to look up roll no, this will take in a hash of the dictionary and the city name and will output roll no code

7. Method to display just student names

We gonna use this method for making result out website part

Use Google as a Powerful Open Source and make some awesome stuff together
Good Luck Guys
